Industry: Chemicals & Fertilizer

Zuari is a single-window agricultural solution provider who partner with Indian farmers for progress and prosperity. It enables agricultural self-sufficiency and economic independence by providing fertilizers that are both affordable and effective. Zuari's operations are spread across five key marketing areas. The company has a manufacturing facility at Goa, with four plants, dedicated to manufacturing urea, DAP and NPK based fertilizers.

Kudos to EDCS...

“You could handle most complex database recovery challenges successfully in no time. We have confidence in your expertise and experience. Looking forward too many more years of partnership in support our database and other systems.

Implementation & maintenance of high available Oracle databases with disaster recovery

Business Need

Zuari (Birla Company) was looking for a professional help for the implementation and maintenance of oracle data base along with disaster recovery

The Challenge

Zuari needed robust high available database solution to run there all business applications and the challenge was to support the critical marking application which should be available all the time for dealers and marking team. They had planned an interface to push the data to SAP application. And hence Zuari wanted expert assistance design and implement the system and to maintain the implemented databases

The Solution

EDCS designed robust and scalable maximum availability architecture system and implemented Oracle Database with Real Application Cluster and Data guard. EDCS has been maintaining these mission critical databases over decade. It has been delivering remote 24X7 support using shared model and the databases are upgraded to latest available version periodically. The preventive inspections and proactive maintenance, effective monitoring and backup up mechanism, periodic mock drill for disaster recovery and backup validation, performance review and tuning ensure smooth running of their various applications minimal or zero disruptions.

Benefits

- High available system with near zero disruptions help to meet business objective
- Stringent SLAs and managed by experienced DBAs assuring the quality of service
- Value for money – expert services at low cost.
